## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 29 September 2009 has been entered.

## **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- On line 3 of claim 1, replace the semi-colon ";" with a comma "," and delete the word "and" such that the end of the line reads, "...a total light emission surface area  $S_0$ , and".
- On line 3 of claim 8, replace the semi-colon ";" with a comma "," and delete the word "and" such that the end of the line reads, "...a total light emission surface area  $S_0$ , and".

***Examiner's Reason for Allowance***

3. Claims 5-4, 8, 10, and 12-32 are allowed.
4. The following is an examiner's statement of reasons for allowance: prior art, whether taken alone or in combination, fails to disclose, teach or render obvious the following specifically called for combination(s) and method therefore:
  - An illumination device, comprising: an incoherent solid state light source adapted to emit light over at least one light emission surface and having a total light emission surface area  $S_0$ ; and a solid light guide, and a light extraction device, wherein: the light extraction device has a refractive index that substantially matches a refractive index of the solid light guide, and includes: *a first surface area  $S_1$  that is in optical contact with the solid light guide and extracts the light by preventing the total internal reflection at the surface area  $S_1$ , and a second surface area  $S_2$  that outputs the light; and the first surface area  $S_1$  is substantially smaller than the surface areas  $S_0$  and  $S_2$ , and the second surface area  $S_2$  is substantially smaller than the surface area  $S_0$  such that an apparent brightness of the light output at the second surface area  $S_2$  is substantially larger than an apparent brightness of the light source (claim 1, emphasis added to allowable subject matter).*
  - An illumination device comprising: an incoherent solid state light source having a total light emission surface area  $S_0$ ; a light circulation device including a solid light guide, and light extraction means for extracting the light from the reflecting surface of the light circulation device to provide an entirety of light output of the illumination device, wherein: the light extraction means includes: *a light extraction surface of area  $S_1$  in contact with the reflecting surface, and has a refractive index that substantially matches a refractive index of the light circulation device thereby extracting the light by preventing the total internal reflection at the light extraction surface, and a light output surface of area  $S_2$  that provides the total light output, area  $S_1$  is smaller than areas  $S_0$  and  $S_2$ , and area  $S_2$  is substantially smaller than area  $S_0$ , so that an apparent brightness of the light output surface is substantially greater than an apparent brightness of the light emission surface (claim 8, emphasis added to allowable subject matter).*
  - A method of manufacturing an illumination device, comprising: providing a solid light guide, providing a light extraction device, the light extraction device including: *a third surface area for extracting light from the solid light guide, the third surface area being substantially smaller than the first surface area, and a fourth surface area for outputting light from the light extraction device, the fourth surface area being larger than the third surface area, optically coupling the light extraction device to the light guide by coupling*

Art Unit: 2885

*the third surface area to the second surface area, eliminating the total internal reflection at the coupled area (claim 26, emphasis added to allowable subject matter).*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
